Exam 000-071: IBM xSeries Technical Principles V7

Question: 1.

Company.com has the following requirements for an xSeries server to perform file and print sharing.

- * Scalable above two processors
- * Up to 4000 users
- * Integrated Network Fault Tolerance
- * Support for RAID-5 internally

Which of the following will meet the customer's requirements?

- A. x226
- B. x365
- C. x445
- D. BladeCenter HS40

Answer: B

Question: 2.

What is the maximum number of x346 servers that can be installed in an IBM NetBAY Enterprise Rack that includes a 2U Keyboard/Monitor drawer and three PDUs?

- A. 20
- B. 21
- C. 23
- D. 40

Answer: A

Question: 3.

Company.com has purchased an xSeries 346 server and wants to install the ServeRAID-7k option. In which slot must the adapter be installed?

- A. Slot 1
- B. Slot 2
- C. Slot 3
- D. Slot 4
- E. Dedicated Slot

Answer: E

Question: 4.

The IBM eServer BladeCenter Management Module is inaccessible. The IP Address is unknown, and the administrator who configured the BladeCenter is not available. Which of the following is the best solution to resolve this issue?

- A. Replace the Management Module
- B. Press the reset button at the bottom of the module to reset to the default configuration
- C. Remove the Management Module and move the IP Address Reset Jumper to reset to the default configuration
- D. Remove the Management Module and pull the battery, wait 20 seconds, then re-install the battery to reset to the default configuration

Answer: B Question: 5.

Company.com is planning to make a new server purchase. They need to provide reports to their management about how many times the servers have failed and about the level of service (Service Level Agreement is in place) that they have provided to the company. Which feature of IBM Director can assist the customer with these tasks?

- A. System Monitors
- B. Capacity Manager Tool
- C. System Availability Tool
- D. IBM Software Rejuvenation

Answer: C

Question: 6.

When planning an IBM Director implementation in respect to the network topology, what would be the best location to place the system running IBM Director Server?

- A. Place IBM Director Server on the edge of the network because it is the best location to manage the entire Network.
- B. Place IBM Director Server in the middle of the network topology to avoid, in the event of the failure of a network component, that IBM Director Server gets isolated.
- C. Place IBM Director Server in the DMZ because, in the event of the failure of a security token, it will be less likely that that IBM Director Server will be corrupted.
- D. Place IBM Director Server in the DataCenter because, in the event of the failure of a fibre channel switch, it will be less likely that that IBM Director Server gets rebooted.

Answer: B

Question: 7.

In an IBM Blade Center Enterprise chassis, which two of the following installed components will occupy a blade bay?

- A. Power Supply
- B. BladeCenter HS20 blade
- C. HS20 SCSI Expansion option
- D. HS20 Fibre Channel Expansion Card
- E. BladeCenter Acoustic Attenuation Module

Answer: BC
