**Answer: C, D**

**Question: 4**

If a server has URL rewriting enabled, what is the result of using the encodeURL() method of the HttpServletResponse interface?

- A. Encryption of sensitive client data in the URL
- B. Increased performance due to browser specific information being encoded in the URL
- C. Redirection of all subsequent requests to a unique domain specified as a URL parameter
- D. Addition of a client's session ID to the URL in a query string

**Answer: D**

**Question: 5**

In a travel booking Web application, a servlet uses JAX-RPC to call a Web service to alter the date on an airline ticket. The Web service throws an exception indicating it cannot change the flight because no seats are available on the requested new date. How does the servlet know that the request was not successful?

- A. The servlet receives a SOAP message that contains a fault element.
- B. The servlet receives a SOAP message that contains an empty body.
- C. The servlet catches a java.rmi.RemoteException or a service-specific exception.
- D. The servlet catches a javax.xml.rpc.JAXRPCException.

**Answer: C**
