Exam 000-210: IBM Storage Networking Solutions, Version 4

Question: 1

Which type of security should be implemented to control device to storage connections in a heterogeneous environment?

- A. WWN Access Control Lists
- B. LDAP hosted on a Linux server
- C. NFS with Windows userID mapping
- D. CIFS with Samba

Answer: A

Question: 2

A customer wants to create a second set of their database application to run tests against, and wants the database to be as close to production as possible, without creating any impact to the production environment. Which offering is the most cost-effective way to accomplish this?

- A. SyncMirror
- B. SnapMirror
- C. FlexCache
- D. FlexClone

Answer: D

Question: 3

When implementing SnapMirror using best practices, which percentage of the available capacity is reserved for the copies?

- A. 5%
- B. 10%
- C. 20%
- D. 25%

Answer: D

Question: 4

A customer infrastructure has an N7600 clustered storage attached via FC SAN to more than 50 high-end servers. These servers are configured to access storage on Node A, while Node B is primarily used as a standby device. Users are reporting poor performance. What is the most cost-effective way to address the performance bottlenecks?

- A. Add more FC disks to Node A and assign disk ownership during a scheduled maintenance window
- B. Change Node B to active and redistribute disk ownership equally during a scheduled maintenance window
- C. Dynamically move half of the servers from Node A to Node B and run performance tuning on both nodes
- D. Change the configuration to Active/Active, which automatically redistributes the disk ownership

Answer: B

Question: 5

A customer's environment has the following protocols: CIFS, NFS, HTTP, FTP, iSCSI, and FCP. Which solution provides unified data access in this environment?

- A. IBM DS3000 series
- B. IBM DS5000 series
- C. IBM x3650
- D. IBM System Storage N7000

Answer: D

Question: 6

What is the maximum number of LUNs that are supported with the IBM System Storage N3600?

- A. 256
- B. 512
- C. 1024
- D. 2048

Answer: C

Question: 7

A customer is considering purchasing a new N series storage subsystem. They require HTTP, FTP, CIFS, NFS, and FCP connectivity. Which licenses must be purchased?

- A. HTTP, FCP, NFS, and CIFS
- B. FCP, FTP, and CIFS only
- C. Data ONTAP, HTTP, FCP, and CIFS
- D. Data ONTAP, FTP, FCP, and CIFS

Answer: A

Question: 8

What is a key reliability advantage of the N series Data ONTAP?

- A. RAID-DP
- B. RAID-4
- C. RAID-5E
- D. RAID-1E

Answer: A
